Java

```java
class Solution {
    public int[] maxPoints(int[][] grid, int[] queries) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[][]} grid
 * @param {number[]} queries
 * @return {number[]}
 */
var maxPoints = function(grid, queries) {

};
```

C++

```cpp
class Solution {
public:
    vector<int> maxPoints(vector<vector<int>>& grid, vector<int>& queries) {

    }
};
```

C#

```csharp
public class Solution {
    public int[] MaxPoints(int[][] grid, int[] queries) {

    }
}
```
